Living Our Mission

The Preble County Mental Health and Recovery Board is statutorily responsible for planning, funding, monitoring, and evaluating substance use and mental health services in Preble County. The Board takes this responsibility very seriously to not only provide basic treatment services to our residents but to expand to provide a full continuum of care to include inpatient and residential services, peer support, harm reduction, suicide and substance use prevention, outreach and diversion, and treatment and supports to children, youth, and adults. The Board believes that mental health and recovery services and support should be accessible and affordable to all Preble County residents. The focus of every decision is our mission to ensure that quality mental health and addiction services and support are available to all Preble County residents.

Board Members

The Board of Directors provides governance, advocacy, and expertise to move the mission forward while being good stewards of the funds that have been entrusted to them. The Board is comprised of mental health and substance use providers, faith-based and business professionals, and people with lived experience. With a clear strategic plan in place, the Board makes important decisions that impact those we serve with a knowledgeable and inclusive view.
